GENUINE PARTS & ACCESSORIES CUSTOMIZATION GUIDE

2026 HARLEY-DAVIDSON

REAL HEART AND SOUL.

Every rider sees something different in their Harley-Davidson® motorcycle. That's why even the smallest change can shift the whole attitude of a bike. Start with what speaks to you and let your personality take the lead.

Enjoy the ride!
Bill Davidson

THE OPTIONS ARE AS ENDLESS AS THE MILES

Ready to transform your ride but not sure where to start? Use this customization guide for inspiration on designing your ultimate dream bike with H-D® Genuine Parts & Accessories.

From fit and function to style and performance, we've mapped out options so your bike feels custom built for you—rides like a dream, delivers the power you crave and screams your signature style.

STAGE UPGRADES: PATH TO PERFORMANCE

STAGE

BENEFITS

START HERE

STAGE I

MOVE MORE AIR AND FUEL

INTAKE + EXHAUST + TUNING UPGRADE
= FOUNDATION FOR ALL FUTURE STAGES

Ideal for riders who want to enhance the performance, look and sound of their motorcycle. The rider will feel up to a 10%* increase in performance when compared to stock bikes throughout the entire RPM range.

CALIFORNIA: These Screamin' Eagle® products are street-compliant for sale and use on specific vehicles, outlined in the product's fitment statement within the State of California. Screamin' Eagle® Performance products are intended for the experienced rider only.

CHOOSE FROM BELOW TO ADD EVEN MORE POWER

STAGE II

GIVE IT A LIFT

STAGE I +
CAM UPGRADE

TORQUE KIT: Ideal for riders looking for instant passing power at cruising speeds. The rider will feel up to a 15%* increase in performance when compared to stock bikes in the low-to-mid RPM range.

POWER KIT: Ideal for riders who want to feel the power build and pull all the way to the redline. The rider will feel up to a 25%* increase in performance when compared to stock bikes in the mid-to-upper RPM range.

STAGE UPGRADE OVERVIEW

It's all about the performance, look and feel with the powerful lineup of Screamin' Eagle® Stage Upgrades. No longer will you have to experience all the trial-and-error that comes with your motorcycle's engine modifications. Engineered to generate specific torque and horsepower gains, our Stage Upgrades improve each mile of your ride.

STAGE III

PUMP UP THE VOLUME

STAGE II +
BIG BORE CYLINDERS AND PISTONS

Ideal for riders who want the largest engine displacement and increased power throughout the entire RPM range. The rider will experience a performance increase throughout the entire RPM range, with up to a 35%* increase when compared to stock bikes in the mid-to-upper RPM range.

An increase in engine displacement allows the engine to swallow more air and fuel, while a higher compression piston squeezes the air and fuel into a more volatile mixture, generating more power when ignited.

Displacement increases are accomplished with larger cylinders, matching pistons and the proper cam upgrade.

STAGE IV

TOP IT OFF

STAGE III +
CYLINDER HEADS AND THROTTLE BODY

Ideal for riders who want the absolute best Harley-Davidson® performance upgrade available. The rider will feel exceptional acceleration, delivering significant gains and up to a 40%* increase when compared to stock bikes in the upper RPM range.

Highest-level performance upgrade available to provide a maximum increase in displacement, compression and flow.

Higher-flowing CNC ported cylinder heads and larger bore throttle body increase the velocity and feed large volumes of air and fuel into the engine, which maximizes power on a larger displacement engine.

Combines ported cylinder heads and larger throttle body in combination with cylinders, matching pistons and proper cam upgrade.

*Dynamometer settings, motorcycle condition, variation, climate and other factors can affect performance output, and results can vary from the performance values declared by Harley-Davidson.

SCREAMIN' EAGLE®

ÖHLINS® SUSPENSION

EXPERIENCE FACTORY TEAM SUSPENSION PERFORMANCE

Upgrade to the premium performance of the H-D Factory Racing Team suspension. Fully adjustable for compression and rebound damping, preload and also ride height on the rear shocks. Featuring race-spec linear spring rate. Remote reservoirs with stainless lines that look the business. Inverted fork design provides enhanced front-end rigidity with reduced steering inertia for unmatched feedback to the rider. Expertly tuned with the aggressive performance bagger rider in mind.

1. COMPRESSION ADJUSTER

- Fine-tunes suspension to control the upward wheel movement when hitting a bump
- Adjusts the speed at which the suspension compresses
- Critical for balancing ride quality and suspension bottoming

2. REBOUND ADJUSTER

- Fine-tunes the downward wheel movement after riding over bumps or potholes
- Adjusts the speed at which the suspension returns from extension
- Critical for balancing ride quality and suspension bounce

3. PRELOAD ADJUSTER

- Critical to setting the proper suspension travel to soak up large potholes and absorb large bumps
- Adjusts for rider sag—the amount the suspension drops under the weight of the rider and cargo

4. REMOTE RESERVOIR

- Remote reservoir keeps the shock oil cooler to maintain damping performance
- Internal bladder separates the oil from the nitrogen gas to reduce cavitation during aggressive riding

5. LENGTH

- The shock length is adjustable from +8mm to -2mm over the standard 13" height

CUSTOMIZE YOUR FIT

The relationship between your seat, handlebars and foot controls has an enormous impact on the comfort and enjoyment you feel when riding your motorcycle. Once you've picked your bike, it's time to choose the options that match your ride to your personal dimensions.

The options shown here for the Street Glide® model are also made in versions available to fit various Touring, Trike and Cruiser models.

HANDLEBARS

Choose a bar that falls easily to hand, and does not pull you out of the seat when maneuvering.

FLHX OE
- Pullback: 6.6″
- Rise: 10.6″
- Tip-to-Tip: 31.3″

BATWING TALLBOY™
- Pullback: 6.74″
- Rise: 12.64″
- Tip-to-Tip: 31.48″

SEATS

Where the seat positions you relative to the foot controls, hand controls and the ground plays a major role in the quality of your ride.

FLHX OE

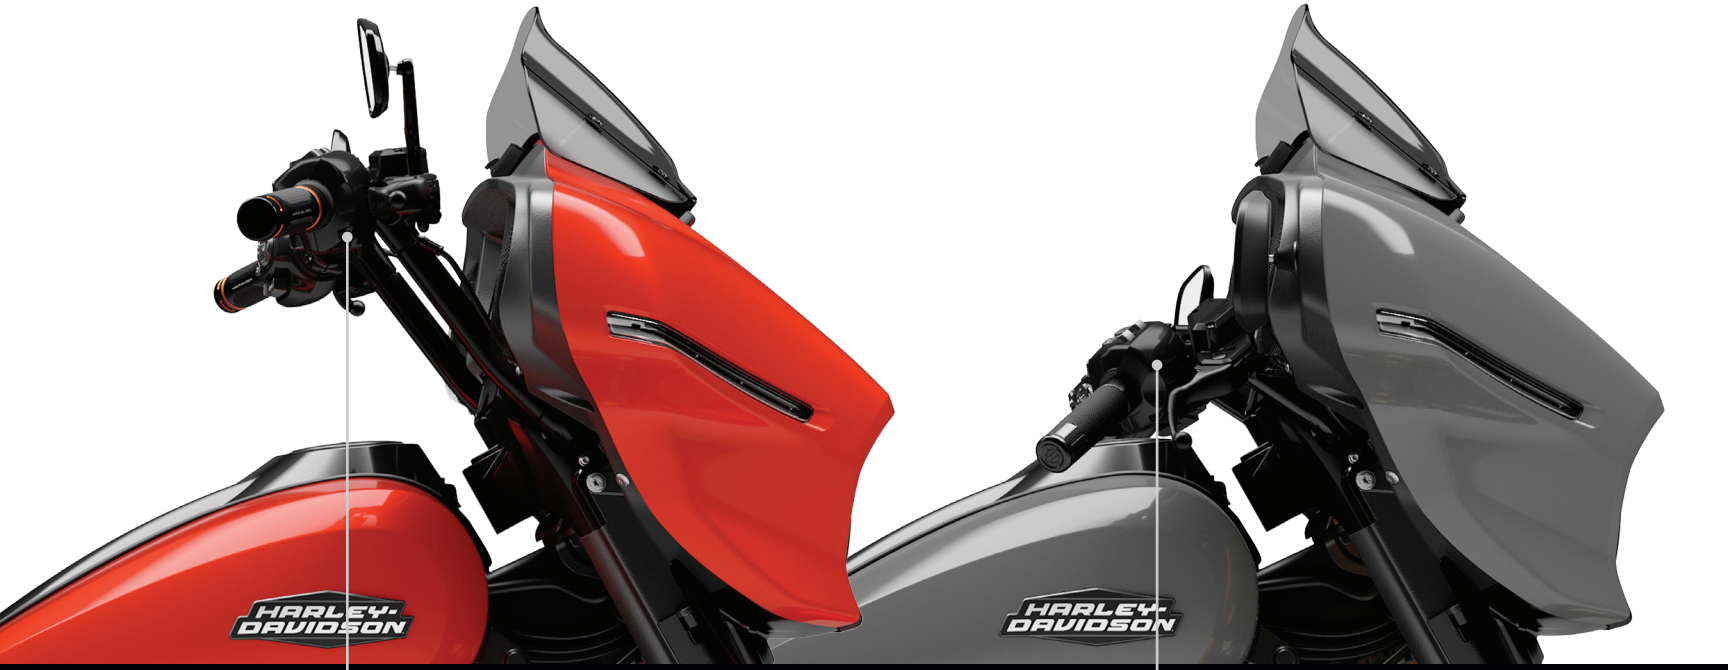
The 2026 Street Glide features a laden seat height of 26.4". Choosing an ergonomic seat can add or remove height to meet your needs.

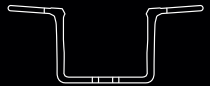
TALLBOY®

Moves the rider up 1" to provide more arm and leg room for the long-limbed rider. Can be equipped with an optional rider backrest (except Adjustable style) for additional touring comfort.

REACH

Enhanced back support padding moves the rider 0.8" lower and 1.5" forward without locking them into a cramped position. Can be equipped with an optional rider backrest for additional touring comfort.





BATWING FUSED

Pullback: 4.26"
Rise: 13.72"
Tip-to-Tip: 36.22"

BATWING REACH™

Pullback: 6.97"
Rise: 9.18"
Tip-to-Tip: 32"

COMFORT IS KING

The ability to spend hours behind the handlebars and rack up hundreds of miles without stopping is dictated by how you feel on your bike. The shape of the seat, the reach to the handlebars and the location of your feet are all major factors in how far you can travel in a day. But don't forget your passenger's needs—they have a stake in this ride as well.

1. **PASSENGER BACKREST** - Enhance your passenger's ride with a simple detachable backrest option, such as an adjustable upright with choice of pad.

2. **LUGGAGE RACKS** - Add a space for adding additional removable luggage with a luggage rack, available for models with and without a Tour-Pak®.

3. **SEATING** - Add long-haul comfort, and in some cases even heating, to your motorcycle with a Sundowner™, Reach®, Tallboy® or any other seat that you find best fits your needs.

4. **RIDER BACKREST** - Enhance your ride with a rider backrest option, such as an adjustable rider backrest available in a variety of styles.

5. **HANDLEBARS** - Change the look and comfort of your ride in one move by changing handlebars to address the hand position touch-point of the rider triangle.

6. **HIGHWAY PEGS** - Stretch out for added comfort when cruising with a highway peg mount and choice of footpeg.

7. **FOOT CONTROLS** - Change the way a rider interacts using their feet, or simply just the look of the bike, by adding a heel shifter, jiffy stand extension and more.

8. **PASSENGER FOOTBOARDS** - Add more surface area for your passenger's feet with passenger footboard mounts and choice of stylish footboards.

9. **TOUR-PAK® PASSENGER BACKREST** - Enhance your passenger's ride with a stylish Tour-Pak backrest, such as a heated backrest pad for added comfort on cooler rides.

10. **HEATED GRIPS** - Combine style and comfort on cool morning or frigid night rides with variable temperature heated grips.

11. **WINDSHIELDS** - Find your perfect amount of airflow and wind deflection by changing the height of your windshield. Start with a windshield that is just below your eye line when looking straight ahead.

12. **WIND DEFLECTORS** - Deflect wind coming off of the engine away from the rider with a mid-frame air deflector.

13. **FAIRING LOWERS** - Add style and wind protection with fairing lowers that control the amount of air traveling toward the rider's legs, and can provide additional storage space, or lighting and speaker mounting locations.

14. **COOLFLOW™ FAN** - Keep yourself comfortable by pulling air from the rear cylinder and exhaust pipe and blowing it towards the ground. A must-have for riders frequently in traffic or riding in parades.

15. **ADJUSTABLE SUSPENSION** - Dial in your suspension performance with Screamin' Eagle® x Öhlins® front and rear suspension components. Adjust preload to account for rider, passenger, and gear weight, as well as length, compression and rebound damping.

THE RIDER & PASSENGER ENVIRONMENT

Accessories that impact the rider and passenger's physical contact with the motorcycle and the management of wind, temperature and road conditions should be your first consideration in building the ultimate touring machine.
